

AI WeatherWise — 8 Phase Structure

3. Project Design Phase:

Your file has a detailed Project Architecture section.

Architecture:

Your project follows the MVC architecture pattern.

It contains:

Your document specifically describes the Express gateway, authentication middleware, logic modules, database interface, and AI service integration.

Database Design:

Your file defines two main entities:

User:

- `_id`
- `name`
- `email`
- `password`
- `role`

Location:

- `_id`
- `user`
- `city`
- `country`
- Relationship
- User & Many Location
- One registered user can save multiple favorite locations.

Roles:

Admin:

- User account management

- API health and system-log monitoring
- Database integrity monitoring

Registered User:

- Manage favorite locations
- Request real-time weather
- Request Gemini AI recommendations
- Manage profile/authentication details

User Flow:

Your exact flow is:

Your file explains:

- Model Layer – Mongoose schemas and MongoDB data
- Controller Layer – processes requests and returns JSON
- View Layer – API routing layer because this is a headless backend service
